Medullated nerve, electrotonus in, **25**, 363
Membrane, general multilayered, diffusion and first order reaction in a, **26**, 157
Migratory effects in predator-prey models, **23**, 253
Morphogenesis, reaction-diffusion equation describing: I. Waveform stability of stationary wave solutions in a one dimensional model, **27**, 17

Nerve cell models, repetitive firing behavior in, based upon a simplified form of the Hodgkin-Huxley equations, **26**, 119

Neural networks, fuzzy, **23**, 151

Neurological control of horizontal and vertical components of oblique saccadic eye movements, **27**, 287

Neuronal membranes, electric field distributions in, **26**, 191

Numerical taxonomy, cladistic character, an idealized concept of **23**, 263

Parsimony problem in evolution, fuzzy aspect of the, **23**, 305

Pest management control, population modeling for, **26**, 283

Pharmacokinetics, model-independent prediction methods in: Theoretical considerations, **25**, 259

Platelet embolus production in atherosclerotic coronary arteries, theoretical investigation of, **25**, 259

Poisson-Boltzmann equation, a simple approximation technique for the solution of, for fixed charge systems, **23**, 113

Population-changing processes and the dynamics of sexual populations, **26**, 55

Population
- finite, loss of variability at one locus in a, **25**, 151
- finite, with recurrent reversible mutation, on the steady state gametic frequency distribution for two linked loci in a, **24**, 257
- genetics, asymptotic analysis of stochastic models in, **25**, 331
- modeling for pest management control, **26**, 283
- model, a birth-and-death process, optimal control of, **23**, 87
- model, on a, **23**, 329
- model, two stage stochastic, **25**, 195
- model, two stage integral, **24**, 61

Postural stability of anthropomorphic systems, **25**, 217

Potencies, constant relative, condition of similarity and the existence of, **23**, 25

Potential, evoked, a possible model for the, **23**, 75

Power laws in compartmental analysis. Part I. A Unified stochastic model, **23**, 337

Predator-prey
- equations with hereditary terms, on the behavior of solutions of, **26**, 41
- models, migratory effects in, **23**, 253
- relationships, stability properties of a class of differential equations modeling, **26**, 267

Prey-predator system, nonlinear correction to Lotka-Volterra oscillation in a, **27**, 9

Pseudo-steady-state hypothesis, diffusion, reaction and the, **25**, 237

Psychophysical discrimination, a model for, **23**, 191

Pulmonary clearance, evaluation of, and accumulation model for gases, **27**,169

Rabies, on the risk of, **24**, 355

Radiation dosimetry, and invariant imbedding—X. Intensity of finite order scattered gamma radiation emergent from a target slab with internal sources, **23**, 1

Radiosensitivity, expression for, based on the "*m* Targets–1 hit" model including recovery of targets hit, **23**, 11

Reaction-diffusion equation describing morphogenesis: I. Waveform stability of stationary wave solutions in a one dimensional model, **27**, 17

Reasoning, inexact, in medicine, a model of, **23**, 351

Remarks on the paper, A Stochastic Bivariate Ecology Model for Competing Species, by Chris P. Tsokos and Sidney W. Hinkley, **24**, 351

Renewable resource, economics of harvesting a, **25**, 139

Renewable resources, biological, note on the form of optimal policies for harvesting, **25**, 189

Reproduction
human, an age-parity dependent stochastic model of, **25**, 1
stochastic model of human, accommodating conjugal histories, **24**, 159

Richards Function, complete, a general solution for the, **27**, 357

Robots, unstable locomotion, dynamic control of, **24**, 129

Similarity, condition of, and the existence of constant relative potencies, **23**, 25

Stochastic process, interactive two-dimensional, a test example of an, **24**, 345

Stream pollution, a stochastic model for, **25**, 309

Survival curves, extensive statistical analysis in fitting mathematical models to, **27**, 155

Synaptic transfer functions, theoretical effects of transmitter persistence on, **26**, 79

"*m* Target–1 hit Model", expression for radiosensitivity based on, including recovery of targets hit, **23**, 11

Time delays, not necessarily destabilizing, **27**, 109

Translational acceleration of fluid-filled rigid spherical shells, the exact solution for the: A model for the development of intracranial pressure, **24**, 1

Transport, flowfield, and lipoprotein (Part I). Theoretical investigation of mass transport to arterial walls in various blood flow regions, **27**, 231

Transport phenomena in zonal centrifuge rotors: X. Optimal gradient solution for velocity sedimentation, **23**, 179

Traps, multiplicity of, and multiple zeroes for eigenvalues of linear compartmental systems, **26**, 89

Tumor cell populations, mixed, cell cycle analysis of, **24**, 107

Two stage integral population model, **24**, 61

Urban air pollution—a diffusion equation model, **24**, 239

Velocity sedimentation, optimal gradient solution for. Transport phenomena in zonal centrifuge rotors, **23**, 179

Viscoelastic-elastic spheres, composite, axisymmetric wave propagation in: A head injury model, **26**, 241

Volterra-type model of interacting populations, solvable limit cycle in a, **23**, 273

Waveform stability of stationary wave solutions in a one-dimensional model: (Part I): Reaction-diffusion equation describing morphogenesis, **27**, 17

Zhabotinskii-Belousov reaction, on the temporal characteristics of a model for the, **24**, 205
